

# **Residential Smart Grid**

---

# Agenda

---

- Problem & Solution
- Project Overview
- Core Innovation
- Investment Opportunity
- Next Steps

# Problem & Solution

---

## The Problem

- Houses waste solar energy while others suffer power shortages
- Individual solar systems create energy islands - excess goes unused
- Current grid infrastructure cannot handle distributed energy
- New construction lacks integrated energy management solutions

## Our Solution

- Residential Smart Grid (RSG) - intelligent energy sharing between houses
- Prototype demonstrates management algorithms
- Seamless integration into new residential developments

# Project Overview

# Core Innovation

---

## Breakthrough Innovation

- World's first virtual battery allocation system using AI
- Fair energy distribution algorithm prevents waste while ensuring equity

## Technology Status

- Prototype demonstrates system stability and control
- Transition from simulation to deployment is straightforward

# Investment Opportunity

---

## Scalable Business Model

- Start with pilot neighborhoods - low initial risk
- RSG becomes premium selling feature for developers
- Higher property values = higher developer profits

## Data Collection Opportunity

- Collect crucial power consumption and generation data
- Essential for any future power infrastructure projects
- Create valuable datasets for energy planning and research

# Next Steps

---

## Immediate Steps

- Pilot installation in new residential development
- 6-month stability and performance validation
- Government approval and certification process

# Thank you
